The global SMT Stencil Printer market size is expected to reach \$ 557.1 million by 2029, rising at a market growth of 4.5% CAGR during the forecast period (2023-2029).

Global key players of SMT Stencil Printer include GKG, ASM Pacific Technology and ITW EAE, etc. The top three players hold a share about 65%. China is the largest market, has a share about 50%. In terms of product type, Automatic is the largest segment, occupied for a share of about 80%, and in terms of application, Consumer Electronics has a share about 30 percent.

Stencil Printing or solder paste printing is a key part in the SMT (Surface Mount Technology) process. Since the solder paste is a mixture of powder and flux, it is fluid during the printing process. Viscosity is a major indicator of the form of solder paste fluids. If it has low viscosity, it flows easily for filling and collapses. If it has high viscosity, it is easy to roll, peel and form. The viscosity requirement is also different at different stages of solder paste printing. SMT has a flexible requirement of viscosity but fortunately viscosity itself is a variable that is easy to change. This requirement of varying viscosity places a higher dependence on the solder paste printing process and the printer's parameter settings.
