The global Snailase market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Snailase refers to an enzyme derived from snail (*Helix pomatia*) digestive system. It is a proteolytic enzyme that belongs to the family of serine endopeptidases.

Snailase is widely used in various industrial applications, particularly in the food and beverage industry. It has the ability to break down and hydrolyze proteins into smaller peptide fragments and amino acids. This enzymatic activity makes it useful for applications such as protein modification, flavor enhancement, and protein degradation.

In the food industry, snailase is utilized for processes like protein hydrolysis, meat tenderization, dairy processing, and flavor development. It can improve the texture and taste of food products and increase their nutritional value. Snailase is also used as an additive in brewing and winemaking to facilitate protein stabilization and clarify beverages.

Apart from the food industry, snailase finds applications in research laboratories for protein purification, protein sequencing, and peptide synthesis. It is also utilized in the pharmaceutical industry for drug development and formulation purposes, as well as in biotechnology for the production of recombinant proteins.

Overall, snailase plays a significant role in various sectors by providing enzymatic activity for protein modification and degradation. Its versatility and effectiveness have contributed to its widespread use in multiple industries.

This report studies the global Snailase production, demand, key manufacturers, and key regions.
