Abstracts

According to our (Global Info Research) latest study, the global Snow Removal and De-icing Robot market size was valued at US\$ 278 million in 2025 and is forecast to a readjusted size of US\$ 637 million by 2032 with a CAGR of 12.5% during review period.

In 2025, global sales of Snow Removal and De-icing Robots reached 18,000 units, with an average selling price of US\$15,000 per unit. Snow Removal and De-icing Robots are automated devices primarily used for snow and ice removal operations on highways, airport runways, urban roads, and other transportation hubs. Through efficient mechanical structures and intelligent control systems, these devices can automatically remove snow and ice in low-temperature environments, reducing manual labor intensity and the risk of traffic accidents. The products are typically equipped with rotating brushes, de-icing liquid spraying systems, and powerful scrapers, enabling rapid clearing of large areas of snow and ice while minimizing damage to roads and the environment. The industry's total production capacity is approximately 25,000 units per year, with an average gross profit margin of about 30%. Upstream raw materials mainly include steel, batteries, hydraulic systems, and rubber tires, while downstream supplies are primarily sourced from public transportation departments, airport management companies, and city management companies. The future lies in the integration of intelligent control, automatic navigation, and environmentally friendly snow melting technologies, driving improvements in equipment efficiency, environmental friendliness, and operational flexibility. With the increasing frequency of extreme weather events caused by global climate change, the market demand for snow removal and de-icing robots will continue to grow, and companies with high efficiency and low energy consumption will benefit from this.
