According to our (Global Info Research) latest study, the global SNP Genotyping and Analysis market size was valued at USD 1499.2 million in 2023 and is forecast to a readjusted size of USD 4256.9 million by 2030 with a CAGR of 16.1% during review period.

A SNP is a single base pair mutation that occurs at a specific site in the DNA sequence. There are usually two variations, or alleles, with one occurring only in between 1% to 5% of the population. On average, two humans, DNA sequences differ in more than three million positions. In some cases, this variation results in the one minor allele causing or predisposing the individual to have a certain disease or trait. The SNP Genotyping and Analysis industry can be broken down into several segments, Dynamic Allele-Specific Hybridization, Molecular Beacons, SNP Microarrays, etc.

Global key players of SNP genotyping and analysis include Thermo Fisher Scientific, Illumina, Agilent Technologies, Roche, Bio-rad, etc. Global top five manufacturers hold a share over 87%. The key players are mainly located in Europe and North America. In terms of product, dynamic allele-Specific hybridization is the largest segment, with a share over 48%. And in terms of application, the largest application is pharmaceuticals and pharmacogenomics, with a share over 52%.
