Abstracts

The global SOAR System Solutions market size is expected to reach $ 5715 million by 2032, rising at a market growth of 15.8% CAGR during the forecast period (2026-2032).

SOAR stands for Security Orchestration, Automation and Response. SOAR system solutions refer to complete, customized end-to-end security operation service packages built around SOAR core platforms, covering demand research, scheme design, product matching, deployment integration, playbook development, staff training, operation acceptance and long-term operation maintenance.

Different from standalone SOAR software products, SOAR system solutions are tailored to an organization?s IT architecture, security tool stack, business risks, compliance requirements and SOC team scale. The core objectives include:
1. Integrating heterogeneous security tools (SIEM, EDR/XDR, firewall, CSPM, threat intelligence, IAM, vulnerability management) through unified orchestration hubs;
2. Building standardized automated response playbooks to realize closed-loop handling of security alerts and incidents;
3. Establishing standardized full-lifecycle incident management processes from alert triage to post-incident review;
4. Reducing manual repetitive work for security analysts, shortening MTTD (Mean Time to Detect) and MTTR (Mean Time to Respond);
5. Supporting automated compliance auditing, threat hunting and regular risk reporting.

A complete SOAR system solution includes hardware/software products, implementation engineering, customized development, technical training and post-launch operation services.
