Abstracts

SoC test equipment is used by semiconductor manufacturers to test the SoCs before final packaging to ensure fault-free production of chips. SoC testing helps detect fabrication errors, timing faults, and electrical interferences. SoC test equipment helps semiconductor manufacturers increase the production yield by high throughput and high parallel test capabilities.

SCOPE OF THE REPORT:

This report focuses on the SOC Test Equipments in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. IT and telecommunication segment accounted for the majority market share during 2017 and will continue to dominate the market for the next few years. One of the major factors responsible for the market segment's growth is the increasing implementation of a new generation chip called microservers, which is based on SoCs. Furthermore, these chips provide cheaper and simpler options to data centers, unlike other conventional chips that require a detailed understanding as well as testing for noise isolation, signal integrity, and thermal management.

In terms of geography, APAC accounted for the majority market share during 2017 and will continue to dominate the market until the end of 2023. Some of the major factors responsible for the dominance of APAC is the high concentration of semiconductor manufacturers in the region and presence of a large number of semiconductor foundries, OSATs, fabless semiconductor companies, and consumer electronic device manufacturers.

The worldwide market for SOC Test Equipments is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
