Abstracts

The global Social Engineering Audit market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Social engineering consists in manipulating people to obtain sensitive information or to perform actions that could lead to a security incident. It is a formidable method of attack which makes it possible to bypass technical protections even if they are solid.

The aim of a social engineering audit is twofold: to assess the reflexes of employees in order to find out the company's degree of vulnerability, and to make them aware of this type of attack through concrete situations that can make an impression.

The value of a social engineering audit lies in the fact that it makes an impression on staff in order to raise their awareness of the risks. Presenting the results of real attacks, with statistics on the behaviour of staff members and the concrete impact of "successful" attacks, is the best way to remove the doubts of the people who are most reluctant to accept the security procedures.
