According to our (Global Info Research) latest study, the global Soda Photomask market size was valued at USD 171.3 million in 2023 and is forecast to a readjusted size of USD 207.2 million by 2030 with a CAGR of 2.8% during review period.

A photomask is an opaque plate with holes or transparencies that allow light to shine through in a defined pattern. They are commonly used in photolithography and the production of integrated circuits (ICs or 'chips') in particular. Masks are used to produce a pattern on a substrate, normally a thin slice of silicon known as a wafer in the case of chip manufacturing. Photomask Materials The most common types of glass for manufacturing masks are Quartz and Soda Lime. Quartz is more expensive, but has the advantage of a much lower coefficient of Thermal Expansion, which means it expands less if the mask gets warm during use and is also transparent at deeper Ultraviolet (DUV) wavelengths, where Soda Lime glass is opaque. Quartz needs to be used where the wavelength being used to expose the mask is less than or equal to 365nm (i-line).

Global key players of soda photomask include Toppan, Photronics, ShenZheng QingVi, etc. The top three players hold a share over 77%. Asia-Pacific is the largest market, has a share about 69%, followed by North America and Europe, with share 16% and 5%, separately.
