The global Soda Spring Water Generator market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Soda spring water generator refer to a device or system designed to replicate the characteristics of a natural carbonated spring. Soda springs are water sources that naturally contain dissolved carbon dioxide, resulting in effervescent or fizzy water. Hot springs containing more than 0.25 grams (250 ppm) of carbon dioxide gas in 1 liter of water are called carbonated springs. The carbonated spring can dissolve carbon dioxide gas into the hot water output by the water heater to form a carbonated spring, which is suitable for bathing, bathing, foot bathing, washing, etc.

Soda hot springs have a healing effect. Shortly after bathing, some small bubbles, which are carbon dioxide, will adhere to the surface of the skin. Through the action of these bubbles, it can promote blood circulation throughout the body, stimulate the flow of blocked lymph, transport oxygen and nutrients to the whole body, and have promising effects on moisturizing the skin and expelling accumulated toxins and aging substances in the body.
