The global Sodium Aluminate market size is expected to reach \$ 496 million by 2032, rising at a market growth of 2.9% CAGR during the forecast period (2026-2032).

Sodium aluminate is a kind of inorganic compound and an important chemical commodity. The existing forms include solid and liquid. Sodium aluminate has broad range of uses. Major applications include use in water and wastewater treatment applications, in papermaking, surface treatment in titanium dioxide manufacturing applications, as a raw material in zeolite and catalyst manufacturing, and as additives in cement and concrete, etc.

The global sodium aluminate market is experiencing growth, driven by its wide range of industrial applications, particularly in water treatment, paper manufacturing, and construction. Sodium aluminate, a compound with the formula NaAlO_2 , is primarily used as a source of aluminum hydroxide in various chemical processes.

Asia-Pacific Dominance: The Asia-Pacific region, particularly China and India, is the largest and fastest-growing market for sodium aluminate. This is due to rapid industrialization, urbanization, and the expanding construction and water treatment sectors in these countries.

North America and Europe: In North America and Europe, the market is driven by the stringent environmental regulations that necessitate the use of effective water treatment chemicals. Additionally, the well-established paper and pulp industry in these regions supports steady demand for sodium aluminate.

Emerging Markets: Regions such as Latin America and Africa are witnessing increased

demand for sodium aluminate, driven by industrial growth and the need for improved infrastructure and water treatment facilities.

This report studies the global Sodium Aluminate production, demand, key manufacturers, and key regions.
