Abstracts

Sodium Bisulfate Monohydrate is a moderately water and acid soluble sodium source for uses compatible with sulfates. Sulfate compounds are salts or esters of sulfuric acid formed by replacing one or both of the hydrogens with a metal. Most metal sulfate compounds are readily soluble in water for uses such as water treatment, unlike fluorides and oxides which tend to be insoluble. Organometallic forms are soluble in organic solutions and sometimes in both aqueous and organic solutions. Metallic ions can also be dispersed utilizing suspended or coated nanoparticles and deposited utilizing sputtering targets and evaporation materials for uses such as solar cells and fuel cells. Sodium Bisulfate Monohydrate is generally immediately available in most volumes. High purity, submicron and nanopowder forms may be considered.

According to our (Global Info Research) latest study, the global Sodium Bisulphate Monohydrate market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.
