Abstracts

The global Sodium Bromoacetate market size is expected to reach \$ 220 million by 2032, rising at a market growth of 5.3% CAGR during the forecast period (2026-2032).

Sodium Bromoacetate is an organobromine compound with the chemical formula $\text{BrCH}_2\text{COONa}$, appearing as a white to off-white crystalline powder that serves as an important intermediate in organic synthesis, pharmaceutical manufacturing, agrochemicals, biotechnology reagents, and specialty chemical production. It is widely used as an alkylating and carboxymethylating agent for introducing bromoacetate functional groups into organic molecules, enabling the synthesis of amino acid derivatives, peptides, heterocyclic compounds, enzyme inhibitors, and fine chemical intermediates. The supply chain begins upstream with raw materials such as bromoacetic acid, bromine, acetic acid derivatives, sodium hydroxide or sodium carbonate, and other halogenation chemicals. Manufacturing typically involves the neutralization of bromoacetic acid with sodium alkali, followed by purification, crystallization, drying, and packaging under controlled conditions due to its reactive nature. Midstream participants include specialty chemical producers, pharmaceutical intermediate manufacturers, and custom synthesis companies that supply sodium bromoacetate in research, industrial, and GMP grades. Downstream demand comes primarily from the pharmaceutical industry, agrochemical manufacturers, biotechnology and life science companies, academic and research institutions, and specialty chemical producers, where it is utilized as a key building block for active pharmaceutical ingredients (APIs), crop protection compounds, biochemical reagents, and advanced organic synthesis applications. In 2025, global Sodium Bromoacetate output was about 40,000 tons with 50,000 tons of capacity, average prices of USD 3,000-8,000 per ton, and gross margins around 31%.
