According to our (Global Info Research) latest study, the global Sodium Chloride Windows market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

Commonly known as rock salt, Sodium Chloride is a soft, soluble and hygroscopic material. It transmits over a wide wavelength range from approximately 0.25 to 16?m, making it an ideal choice for lenses and other optical components used in the UV and IR ranges. Sodium Chloride has a maximum operating temperature of 400°C and needs to be protected from atmospheric conditions to avoid moisture degradation. It is recommended that coatings be applied where the material is exposed and that a high standard of polishing be achieved under humidity controlled conditions. It has a hardness of HK18.2, which is soft, so it needs to be handled with care.

This report is a detailed and comprehensive analysis for global Sodium Chloride Windows market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Structure and by Application.
