Abstracts

The global Sodium Ethylparaben market size is expected to reach \$ 12.51 million by 2032, rising at a market growth of 3.3% CAGR during the forecast period (2026-2032).

Sodium Ethylparaben is a highly effective, broad-spectrum, water-soluble preservative belonging to the sodium salt family of parabens. It primarily exists as a white powder that is readily soluble in water; it is frequently utilized as an antimicrobial agent in pharmaceuticals, food products, cosmetics, and textiles to inhibit microbial growth and extend product shelf life.

In 2025, global sales volume is projected to approach 1,000 tons, with a market price of approximately \$8.3 to \$11 per kilogram. The industry's gross profit margin stands at around 10% to 20%.

The upstream sector relies primarily on basic petrochemical feedstocks—specifically p-hydroxybenzoic acid and ethanol—which undergo an esterification reaction catalyzed by an acid to yield ethylparaben, followed by a salification reaction with sodium hydroxide. The midstream sector encompasses the processes of fine chemical synthesis and purification. As a water-soluble, broad-spectrum antimicrobial preservative, it is renowned for its safety and high efficacy. It finds extensive application across various fields—including pharmaceuticals, cosmetics, and food products—and is particularly well-suited for manufacturing processes that require water-soluble raw materials.

This report studies the global Sodium Ethylparaben production, demand, key manufacturers, and key regions.
