Abstracts

According to our (Global Info Research) latest study, the global Sodium Hexafluorozirconate market size was valued at US\$ 25.72 million in 2025 and is forecast to a readjusted size of US\$ 34.11 million by 2032 with a CAGR of 4.1% during review period.

In 2025, global sales volume of Sodium Fluorozirconate was approximately 5,000 tons, with an average market price of about USD 5,000 per ton. Gross margins among major producers were generally around 20%~35%.

Sodium Fluorozirconate usually refers to Sodium Hexafluorozirconate, CAS No. 16925-26-1, with the molecular formula Na_2ZrF_6 . It is an inorganic fluoro-zirconate salt mainly composed of sodium, zirconium, and fluorine, typically supplied in white powder or crystalline form. Key quality indicators include assay, ZrO_2 equivalent content, fluorine content, moisture, free acid, insoluble matter, and impurity levels such as iron, silicon, and chloride. The product is relatively stable under normal storage and transportation conditions and has strong fluoro-zirconate complexing properties and surface activation capability, requiring strict control over purity, particle size distribution, and impurities.

Its upstream raw materials mainly include zirconium oxychloride, hydrofluoric acid, fluoro-zirconic acid, sodium carbonate or sodium hydroxide, purified water, and packaging materials. Midstream production focuses on fluoro-zirconate synthesis, crystallization control, impurity removal, filtration, drying, and fluorine-containing wastewater treatment. Downstream applications mainly include metal surface treatment, aluminum-magnesium alloy fluxes, ceramic and glass additives, and zirconium fluoride

compound preparation, with market demand closely related to the development of chromium-free surface treatment, light alloy processing, functional ceramics, and fine fluorine chemicals.
