Abstracts

The global Sodium L-Ascorbate market size is expected to reach \$ 273 million by 2032, rising at a market growth of 4.6% CAGR during the forecast period (2026-2032).

Sodium L-ascorbate is the sodium salt form of Vitamin C (L-ascorbic acid). It is a white to pale yellow crystalline powder that is readily soluble in water. As a highly bioavailable Vitamin C supplement, it is widely utilized in sectors such as pharmaceuticals and food, serving functions that include antioxidant activity, maintaining food stability, and nutritional fortification.

Sodium L-ascorbate is, in essence, the sodium salt of L-ascorbic acid; consequently, its industrial value chain is inextricably linked to the production route of Vitamin C. The upstream segment typically centers on sorbitol as the key intermediate raw material; through a classic two-step fermentation process, sorbitol is first converted into L-sorbose, then into 2-keto-L-gulonic acid, which subsequently undergoes chemical transformation to yield L-ascorbic acid, and finally, through a sodium salt formation process, produces Sodium L-ascorbate. The midstream segment primarily encompasses salt formation, crystallization, drying, grading, and packaging operations, while the downstream market is concentrated within sectors such as food and pharmaceuticals.

In 2025, global sales volume is projected to reach approximately 50,000 tons, with prevailing market prices ranging from approximately USD 3,500 to USD 4,200 per ton, and typical gross margins falling within the range of 25% to 35%.
