A Solid Oxide Fuel Cell (SOFC) Cogeneration System is a type of energy generation system that combines the production of electricity and heat in a highly efficient manner. SOFCs use a ceramic electrolyte to convert fuel into electricity through an electrochemical process, producing heat as a byproduct. This heat can then be captured and used for various applications, such as heating water or buildings, making the system more energy efficient and cost-effective. SOFC cogeneration systems are considered a clean and sustainable energy solution, as they have lower emissions and higher efficiency compared to traditional power generation methods.
