Abstracts

According to our (Global Info Research) latest study, the global Soft Board FPC market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

FPC is a flexible and foldable printed circuit board based on polyimide or polyester film, which has high reliability and excellent flexibility. The advantages of soft board FPC are: small size and light weight, suitable for high-density, miniaturization and lightweight electronic product design. It is highly flexible and can move and expand arbitrarily in three-dimensional space, realizing the integration of component assembly and wire connection. Good heat dissipation performance can reduce the operating temperature of the circuit and improve the stability and life of the circuit. Save space and materials, reduce the number of circuit board layers and connectors, and reduce costs and repair rates.
