Abstracts

The global Soft Capsule Technology market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Soft capsule is a film formed into a certain shape while filling it with a liquid or paste. Soft capsules are manufactured by concurrently formulating a film and filling the film with the content. There are two manufacturing principles.

One is a rotary method, where two film sheets are placed between two die rolls while injecting a liquid such as medicine between the two sheets, and the dies perform pressured formation, sealing and cutting of the capsules. This is also known as “punching method”. The other is a seamless method, where a liquid such as medicine is dropped from the inner section of a double concentric nozzle while film liquid containing a gelling agent from the outer section, and round seamless capsules are formulated by means of the interfacial tension. This also known as the “dripping method”. It can be used in many ways including as a simple container (not to be ingested), to be swallowed whole, or by crushing it. Soft capsule technology is used to improve biological utilization, efficient compounds, solve food impact, improve the stability of active ingredients, cover the smell and odor, and effective product differentiation and brand promotion.
