According to our (Global Info Research) latest study, the global Soft Magnetic Material Coercivity Measuring Instrument market size was valued at US\$ 109 million in 2024 and is forecast to a readjusted size of USD 149 million by 2031 with a CAGR of 4.5% during review period.

The Soft Magnetic Material Coercivity Measuring Instrument is a specialized device used to determine the coercivity (H_c) of soft magnetic materials. Coercivity is an important magnetic property of soft magnetic materials, referring to the strength of the reverse magnetic field required to reduce the material's residual magnetic flux density to zero after an external magnetic field is removed. This instrument utilizes a series of specific measurement techniques to accurately assess the material's hysteresis characteristics and provide precise coercivity values. It is commonly used in research and development, quality control, and material performance evaluation.
