According to our (Global Info Research) latest study, the global Soft Magnetic Materials and Components market size was valued at US\$ 4214 million in 2024 and is forecast to a readjusted size of USD 5180 million by 2031 with a CAGR of 3.0% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Soft magnetic materials are materials that are easily magnetized and demagnetized. They are used in a variety of applications where magnetic properties are required, such as in transformers, electric motors, and magnetic shielding. Some common soft magnetic materials include iron, nickel, and cobalt, as well as various alloys such as permalloy and mu-metal. These materials have high magnetic permeability and low coercivity, allowing them to quickly respond to changes in magnetic fields. Soft magnetic components, such as cores and laminations, are used to enhance the magnetic properties of devices like transformers and inductors. Cores are typically made from soft magnetic materials and are used to concentrate magnetic flux, while laminations are thin sheets of soft magnetic material that are stacked together to reduce eddy current losses. Overall, soft magnetic materials and components play a crucial role in the design and operation of many electrical and electronic devices, providing efficient and reliable magnetic properties for a wide range of applications.
