The soft-pack lithium battery filling machine is the core equipment in the production of lithium-ion batteries. It is specially used to accurately inject electrolyte into the core pack of soft-pack batteries. The equipment uses a vacuum negative pressure environment to evenly penetrate the electrolyte into the micropores of the pole piece and the diaphragm to ensure that the electrolyte is fully infiltrated and no bubbles remain, which directly affects the capacity, cycle life and safety of the battery. Its core processes include high-precision metering pumps to control the injection volume, vacuum-sealed injection, multi-station synchronous operation, and static exhaust and sealed packaging after injection.
