Abstracts

Soft serve is a type of ice cream that is softer than regular ice creams as a result of air being introduced during freezing.

Soft Serve Freezer is used to make Soft Serve Ice cream. Soft Serve Freezer may prepare the mixture by employing the hand-cranking method or by employing an electric motor. The resulting preparation is often chilled through either pre-cooling the machine or by employing a machine that freezes the mixture.

A Soft Serve Freezer has to simultaneously freeze the mixture while churning it so as to aerate the mixture and avoid ice crystals. As a result, most ice creams are ready to consume immediately. However, those containing alcohol must often be chilled further to attain a firm consistency. Some machines, such as certain lower-priced countertop models, do require that the resulting mixture be frozen for additional time after churning is complete.

According to our (Global Info Research) latest study, the global Soft Serve Freezer market size was valued at US\$ 860 million in 2023 and is forecast to a readjusted size of USD 1114 million by 2030 with a CAGR of 3.8% during review period.
