According to our (Global Info Research) latest study, the global Soft Superconductor market size was valued at US\$ 1816 million in 2025 and is forecast to a readjusted size of US\$ 2554 million by 2032 with a CAGR of 5.0% during review period.

Soft superconductors are ductile, low-temperature superconducting materials designed for magnet applications that require low magnetic hysteresis losses, high mechanical flexibility, and stable superconducting performance under cryogenic conditions. Typical soft superconductors are supplied in wire or tape form and are widely used in medical imaging systems, particle accelerators, fusion research devices, and high-field laboratory magnets. In 2025, the average global selling price of soft superconducting materials is approximately US\$4,200 per kilogram, with global sales volume reaching around 420 metric tons. The industry generally maintains a gross margin range of 25%-40%, supported by high technical barriers, precision metallurgical processing, long qualification cycles, and strong customer stickiness. The supply chain includes upstream high-purity metals and alloy processing, midstream wire drawing, heat treatment and composite fabrication, and downstream demand from magnet manufacturers, medical equipment suppliers, research institutions, and advanced industrial users.

The market for soft superconductors is an emerging and rapidly evolving sector in the field of superconductivity. While superconductors have been known for several decades, soft superconductors, also known as high-temperature superconductors (HTS), have gained significant attention in recent years. Here are some key trends in the soft superconductor market: Increasing demand for energy-efficient technologies: Soft superconductors have the ability to conduct electric current with zero resistance at

relatively higher temperatures compared to conventional superconductors. This property makes them attractive for various energy-related applications, such as power transmission and generation, energy storage, and electric vehicle technologies. The demand for energy-efficient technologies is driving the adoption of soft superconductors in these sectors.
