Abstracts

According to our (Global Info Research) latest study, the global Soft Target Drive System market size was valued at US\$ 463 million in 2025 and is forecast to a readjusted size of US\$ 913 million by 2032 with a CAGR of 10.2% during review period.

The Soft Target Drive System is a dynamic motion control system specifically designed for testing Advanced Driver Assistance Systems (ADAS) and autonomous vehicles. It provides soft test targets?such as pedestrians, cyclists, motorcyclists, or full-scale vehicle targets?with controllable movement, including speed, trajectory, acceleration, and time-synchronized control. The system typically comprises a drive mechanism, motion platform, controller, and accompanying software, enabling programmable operation of static or dynamic test scenarios, multi-target coordination, and high-fidelity reproduction. It supports applications including vehicle perception algorithm validation, collision simulation, low-speed parking assist testing, and high-speed AEB verification. In 2025, global shipments of Soft Target Drive Systems were approximately 3,000 sets, with an average unit price of around USD 150,000 per set and a gross margin of about 35%.

With the rapid adoption of Advanced Driver Assistance Systems (ADAS) and autonomous driving technologies worldwide, increasing demands for test precision, scenario complexity, and automation are driving high growth for Soft Target Drive Systems. As the core of dynamic testing, these systems can precisely control soft test targets?including pedestrians, cyclists, motorcyclists, and full-scale vehicle targets?across low, medium, and high-speed scenarios, supporting applications such as AEB verification, ADAS perception algorithm calibration, low-speed parking assist testing, and high-speed collision simulation. Stricter safety regulations (Euro NCAP,

C?NCAP, IIHS) regarding VRU protection and collision warning require OEMs and third-party labs to adopt high-fidelity, programmable dynamic platforms. Meanwhile, multi-sensor fusion testing and automated workflow demands further increase the need for programmable, multi-target coordinated systems with high-precision positioning and closed-loop data analysis. Therefore, Soft Target Drive Systems are not only motion control devices for dynamic targets but also a critical component of the ADAS testing ecosystem.
