Abstracts

Soft tissue minimally invasive diode lasers are ideal for procedures that involve cutting or contouring the soft tissue of the mouth. As a clinical tool, soft-tissue diode lasers offer a wide range of clinical treatment possibilities, as they enable precise cuts in the gums and other soft tissues, while also eliminating bleeding at the site and reducing the healing time of patients. Minimally invasive diode lasers are ideal for grooving during preparation, sterilizing pulp canals, treating periodontal disease, and even teeth whitening. Many of the latest dental diode lasers are portable and easy to use with simple touchscreen controls.
