Abstracts

According to our (Global Info Research) latest study, the global Soft Vehicle Targets market size was valued at US\$ 132 million in 2025 and is forecast to a readjusted size of US\$ 261 million by 2032 with a CAGR of 10.2% during review period.

Soft vehicle targets are standardized vehicle models used for ADAS, autonomous driving, and crash simulation testing. They are typically deformable or energy-absorbing soft structures, and can be static or dynamic. They are primarily used to verify the performance of vehicle perception systems, collision warning systems, AEB triggering, and collision avoidance control, providing repeatable and quantifiable data while reducing the risk of damage to the vehicle during testing. In 2025, global shipments of soft vehicle targets were estimated at approximately 8,580 units, with an average price of approximately US\$15,000 per unit and a gross margin of approximately 40%.

With the rapid development of autonomous driving technology and Advanced Driver Assistance Systems (ADAS), the demand for high-precision, repeatable test targets has increased significantly. Soft vehicle targets can provide a safe and controlled testing environment in both laboratory and field testing, thus becoming a key infrastructure for the development of autonomous vehicles and ADAS. The demand for soft vehicle targets continues to grow with the development of autonomous driving and active safety technologies. Dynamic soft vehicle targets are typically equipped with motion platforms and programmable functions, simulating real vehicle behavior; they are more expensive and suitable for medium- to high-speed crash simulations and AEB system verification. Static low-speed soft vehicle targets are suitable for perception algorithm verification and low-speed obstacle avoidance testing. Market supply is concentrated among a few international manufacturers and a small number of domestic companies. In addition,

traffic safety assessments, collision simulations, and intelligent transportation system integration testing are also potential growth areas. With the increase in testing of L3 and above autonomous vehicles in the future, industry demand will further expand.
