Abstracts

Software-defined everything (SDE) is an umbrella term for a number of technologies that are helping redefine IT. Currently, this group of technologies encompasses software-defined networking (SDN), software-defined storage (SDS), and software-defined data centers (SDDC). Each approach aims to abstract the operating environment from physical infrastructure, while automating the processes that manage the infrastructure. By freeing businesses from proprietary hardware and simplifying the provisioning and management of IT resources, the hope is that software-defined approaches will lead to cost savings, efficiency gains, and improved business agility.
