Abstracts

Software Defined Infrastructure (SDI) is a method of controlling IT infrastructure with the help of software. In general, SDI is a combination of networking, storage, and computing, which are pre-defined by hardware and software solutions. Deploying SDI in an organization has numerous advantages, such as reduction of capital expenditures, automation of manual resource provisioning, increase in flexibility, agility, and others.

Scope of the Report:

Software defined infrastructure helps in minimising capital expenditures in two ways. The first method is by providing defined protocols and standards for limiting dependency on software and hardware, and the second method is by deploying virtualization and cloud technologies in existing IT environment as a substitute for providing new equipment for increasing scalability.

Software defined infrastructure helps IT organizations to run smoothly by automating the processes within the organization. The removal of manual tasks and provision of rule-based server are driving IT organizations to deploy SDI. SDI helps in improving security management, increasing staff productivity and minimising manual errors.

North America dominates the market for software defined infrastructure, followed by Europe. The presence of major players and increasing deployments in data centers in the North America are supporting the market growth. Asia Pacific is anticipated to show high growth rate during the forecast period. The rising economic conditions in developing countries, such as India, China, and Taiwan, and increase in deployment of server virtualization platforms are promoting the software defined infrastructure market. The adoption of Network Function Virtualization (NFV) and Software Defined Networking (SDN) in countries instead of like Japan, are fuelling the market growth.

The global Software Defined Infrastructure (SDI) market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.

The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.

North America, especially The United States, will still play an important role which cannot be ignored. Any changes from United States might affect the development trend of Software Defined Infrastructure (SDI).

Europe also play important roles in global market, with market size of xx million USD in 2017 and will be xx million USD in 2023, with a CAGR of xx%.
