The Software-Defined Vehicles (SDV) refer to the use of software-defined networking (SDN) and software-defined architecture (SDA) technologies to enhance the functionality, safety, and efficiency of vehicles. This technology is becoming increasingly popular in the automotive industry as it allows vehicles to be more connected, customizable, and secure. It also allows for more efficient communication between the various systems within the car, such as the engine, braking, and safety systems. SDVs enable customers to receive firmware patches, enhancements to infotainment, tuning, and monitoring of key functional capabilities like vehicle and powertrain dynamics, and feature-on-demand comfort services via over-the-air (OTA) updates.
