Abstracts

According to our (Global Info Research) latest study, the global Software-Defined WAN Solutions market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Software-Defined WAN or SD-WAN connects enterprise networks, like branch offices and data centers, over a large geographical area.

Traditional WAN connects locations using dedicated MPLS circuits, but this is expensive and does not work well for cloud-based systems. SD-WAN works to deliver a secure and simplified WAN connection by using a combination of traditional circuits (like MPLS, broadband internet, and 4G/LTE) and software-based technology. It can be used to deliver basic WAN connectivity, or premium business services like VPN, WAN optimization, and application delivery control (ADC).

The Global Info Research report includes an overview of the development of the Software-Defined WAN Solutions industry chain, the market status of BFSI (Virtual Appliance, Physical Appliance), Retail (Virtual Appliance, Physical Appliance), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Software-Defined WAN Solutions.
