## Abstracts

The global Solar Canopy for Commercial EV Charging market size is expected to reach \$ 1135 million by 2032, rising at a market growth of 9.1% CAGR during the forecast period (2026-2032).

Solar Canopy for Commercial EV Charging is an integrated infrastructure solution that combines photovoltaic power generation with canopy structures dedicated to electric vehicle charging in commercial parking environments, enabling coordinated delivery of on-site electricity generation, charging services, and space efficiency. Its advantages include improved land utilization, flexible deployment, predictable power output, and the ability to enhance the overall return of commercial parking assets by coupling energy generation with charging operations. In 2025, the industry's capacity utilization rate was about 65% and the average gross margin was approximately 23%. Upstream, photovoltaic modules and steel structural materials are the core inputs, with representative suppliers including LONGi, Trina Solar, JinkoSolar, First Solar, ArcelorMittal, and POSCO, supplying standardized power-generating units and load-bearing structures. The midstream segment focuses on system concept design, structural engineering, photovoltaic and electrical integration, construction management, and grid connection, translating site-specific requirements into reliable and cost-efficient canopy solutions. Downstream demand is mainly driven by shopping malls, industrial parks and logistics parks, as well as airports and hospitals, with representative customers including Simon Property Group, Unibail-Rodamco-Westfield, Prologis, DHL, Aena, and Mayo Clinic.

The market outlook for Solar Canopy for Commercial EV Charging is defined by the convergence of charging demand growth and the need for cost-efficient, space-optimized energy infrastructure in high-traffic commercial sites. In applications such as shopping centers, industrial and logistics parks, airports, and hospitals, canopies are increasingly evaluated as long-life assets that combine power generation, charging

availability, and site enhancement rather than stand-alone photovoltaic installations. Current market conditions show rising participation from engineering contractors and integrators, which has intensified competition and placed pressure on upfront pricing. As a result, profitability is shifting toward projects that emphasize standardized design, efficient construction, and predictable operation performance. Over time, suppliers that can integrate engineering discipline with operational value capture, including higher utilization rates of charging assets and improved system uptime, are more likely to translate deployment scale into stable and defensible returns. This report studies the global Solar Canopy for Commercial EV Charging demand, key companies, and key regions.
