Abstracts

The global Solar Canopy Carport market size is expected to reach \$ 3493 million by 2032, rising at a market growth of 4.6% CAGR during the forecast period (2026-2032).

Solar Canopy Carport are distributed solar power systems that integrate photovoltaic modules onto carport structures, enabling parking facilities to provide vehicle shading, weather protection, and on-site solar power generation. A typical photovoltaic carport consists of a supporting canopy structure, PV modules, mounting systems, inverters, cables, and electrical distribution equipment, and can be further integrated with energy storage systems, EV chargers, and energy management systems depending on project requirements. They are widely used in commercial parking lots, industrial parks, public facilities, transportation hubs, and residential communities. The system price of Solar Canopy Carport typically ranges from approximately USD 1.2-2.0 per W, equivalent to about USD 4,000-10,000 per parking space. From a global market perspective, the current annual new sales volume is estimated at around 2-3 GW, corresponding to approximately 600,000-900,000 parking spaces.

The upstream supply chain of Solar Canopy Carport mainly includes PV modules, steel or aluminum structural components, solar mounting systems, inverters, cables, combiner boxes, distribution cabinets, fasteners, and waterproof sealing materials. For PV-storage-charging integrated projects, batteries, EV chargers, and energy management systems are also involved. The midstream segment consists of carport structure manufacturers, mounting system suppliers, system integrators, and installation contractors, which are responsible for structural design, PV system configuration, construction, installation, and grid connection. Downstream demand mainly comes from commercial parking lots, industrial parks, public institutions, municipal parking facilities, transportation hubs, EV charging stations, and residential communities, driven by

distributed solar deployment, efficient use of parking space, EV charging infrastructure expansion, and carbon reduction targets.

Solar Canopy Carport are evolving from simple solar shading structures into integrated distributed energy solutions for parking facilities. Market demand is mainly driven by the limited availability of commercial rooftop space, the need for more efficient use of parking areas, the expansion of EV charging infrastructure, and the decarbonization efforts of public and commercial facilities. Compared with conventional rooftop or ground-mounted PV systems, Solar Canopy Carport offer higher space utilization value, clear application scenarios, and strong compatibility with EV chargers and energy storage systems, although their adoption is still influenced by structural design requirements, installation costs, grid connection conditions, and project payback considerations. Future growth is expected to be concentrated in commercial parking lots, industrial parks, transportation hubs, and public facilities with stable power demand and sufficient parking resources, while competition will gradually shift from standalone carport structures toward integrated PV-storage-charging and energy management solutions.
