According to our (Global Info Research) latest study, the global Solar Carport Frame market size was valued at US\$ 574 million in 2024 and is forecast to a readjusted size of USD 1004 million by 2031 with a CAGR of 8.3% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

A solar carport frame is a structural framework designed to support photovoltaic (PV) panels while simultaneously providing shelter for vehicles. It serves a dual purpose: generating clean, renewable solar energy through the PV panels installed on its top, and offering a covered parking area that protects cars, motorcycles, or other vehicles from elements such as sunlight, rain, snow, and hail. Constructed from materials like steel, aluminum alloy, or concrete, these frames vary in design. Some feature single - column or multi - column structures for stability, while others come in different slopes such as single - slope, double - slope, flat - top, or curved - surface, depending on the specific requirements of solar energy capture, space utilization, and architectural aesthetics. Solar carport frames can be categorized as additional - type, where PV panels are added to an existing carport, or constructed - type, where the panels are integral to the carport's structure. Moreover, modern solar carport frames may also incorporate intelligent features, including electric vehicle charging stations and automated monitoring systems, making them not only a sustainable energy solution but also a convenient and forward - thinking addition to parking infrastructure.
