According to our (Global Info Research) latest study, the global Solar Carport Mounting System market size was valued at US\$ 702 million in 2025 and is forecast to a readjusted size of US\$ 1264 million by 2032 with a CAGR of 8.9% during review period.

Solar Carport Mounting System is a structural photovoltaic solution that integrates solar power generation with carport frameworks, enabling coordinated electricity production and space utilization within parking environments. Its advantages include improved land-use efficiency, flexible construction methods, predictable power generation returns, and the ability to enhance the overall value of parking assets by supporting energy-related services. In 2025, the industry's capacity utilization rate was about 65% and the average gross margin was approximately 23%. Upstream, photovoltaic modules and steel structural materials are the core inputs, with representative suppliers including LONGi, Trina Solar, JinkoSolar, First Solar, ArcelorMittal, and POSCO, supplying standardized power-generation units and load-bearing structures. The midstream segment focuses on system design, structural engineering calculations, photovoltaic and electrical integration, construction management, and grid-connection configuration, translating site-specific conditions into reliable and cost-effective carport solutions. Downstream demand mainly comes from residential and commercial applications, with representative customers such as Tesla, ChargePoint, Vanke, Country Garden, and Wanda Group.

The market outlook for Solar Carport Mounting System is driven by the increasing emphasis on efficient land use and the integration of photovoltaic infrastructure into existing parking assets. In residential communities and commercial properties, carport systems are being evaluated not only as structural supports for solar modules but as

long-life infrastructure that enhances site value, energy generation capability, and future charging readiness. Current industry conditions show rising participation from construction and energy solution providers, leading to more standardized designs and tighter price competition. As a result, margin expansion is becoming more dependent on engineering optimization, modularization, and installation efficiency rather than component sales alone. Over time, suppliers that can control project costs, shorten delivery cycles, and align system design with downstream energy applications are better positioned to convert project volume into stable and sustainable returns.
