The global Solar Concentrated Power System market size is expected to reach \$ 13130 million by 2029, rising at a market growth of 13.7% CAGR during the forecast period (2023-2029).

The Solar Concentrated Power System market continues to evolve, with a focus on increasing efficiency, reducing costs, and expanding deployment to meet the growing demand for clean and reliable energy sources.

Solar Concentrated Power System, often abbreviated as CSP, is a type of solar power generation technology that uses mirrors or lenses to concentrate sunlight onto a small area, typically a receiver or heat exchanger. The concentrated sunlight generates high temperatures, which are then used to produce steam or heat a fluid. This high-temperature heat is utilized to drive a turbine and generate electricity, similar to the process in a conventional power plant.
