Abstracts

Solar control films are thin laminate films specifically designed for transparent building surfaces such as doors and windows and are majorly employed to prevent transfer of heat and light. Moreover, these films also provide effective barrier to high heat levels, thereby providing protection against glare, hotspots, and uneven temperature variations. In addition, these films have significantly led to reduction of heat occurred due to sun on glass, which in turn reduces the air-conditioning and cooling costs. At the time of winters these films reduce heat loss by reflecting up to 35 percentage of heat back in to the room. Furthermore, the use of solar films has now become a commonplace in urban areas in tropical countries and in other regions that experience warm temperatures.
