According to our (Global Info Research) latest study, the global Solar Cover market size was valued at US\$ 642 million in 2025 and is forecast to a readjusted size of US\$ 908 million by 2032 with a CAGR of 5.2% during review period.

Solar Cover refers to a floating cover placed directly on the surface of a swimming pool or spa, typically made of bubble-structured polyethylene (PE) film or higher-performance floating thermal blanket materials. Its main functions are to capture solar heat, reduce water evaporation, lower overnight heat loss, and reduce heating energy and chemical consumption; for indoor pools, it can also help reduce ventilation and dehumidification loads. In this report, the product boundary of Solar Cover includes only the floating cover material itself and excludes automatic covers, safety covers, winter covers, reel systems, and liquid solar blankets. Upstream inputs mainly include PE resin, color masterbatch, UV/antioxidant additives, and functional cover materials; midstream activities include cutting, heat sealing/welding, edging, and custom fabrication; downstream customers include residential pool owners, above-ground pool users, hotels, schools, clubs, public pool operators, distributors, and installers. In the retail market, standard products are commonly priced at around US\$25?80 per unit, while bulk export quotations from Chinese manufacturers are often around US\$0.3?1.5 per sqm.
