## Abstracts

Solar hybrid power systems are hybrid power systems that combine solar power from a photovoltaic system with another power generating energy source. A common type is a photovoltaic diesel hybrid system, combining photovoltaics (PV) and diesel generators, or diesel gensets, as PV has hardly any marginal cost and is treated with priority on the grid. The diesel gensets are used to constantly fill in the gap between the present load and the actual generated power by the PV system.

### SCOPE OF THE REPORT:

This report focuses on the Solar Diesel Hybrid Power Systems in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

During 2017, APAC dominated the solar diesel hybrid power systems market and accounted for more than 50% of the total market share. The major growth factors in the region are the absence of reliable grid infrastructure, which has propelled the requirement for micro and mini-grids to supply power to population and industries that are located in the remote areas. Moreover, the region has good climate conditions for generating solar power, which will augment the construction of microgrids in the region in the coming years.

The worldwide market for Solar Diesel Hybrid Power Systems is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
