Abstracts

The global Solar Glass market size is expected to reach \$ 14630 million by 2029, rising at a market growth of 13.3% CAGR during the forecast period (2023-2029).

Global key players of solar glass include Xinyi Solar, FLAT and CNBM. The top three players hold a share about 71%. The global origins are mainly located in Europe, China, India and South Korea, with China being the largest production region, holding more than 90% of the market share. In terms of product, 3.2mm is the largest segment, with a share about 49%. And in terms of application, the largest application is dual glass module, with a share about 51%.

Solar Glass for solar cells is generally used as an encapsulation sheet for solar modules to protect solar cells. After the solar cell is installed in the solar panel, the conversion efficiency will be reduced because the encapsulating glass absorbs and reflects sunlight. Therefore, in order to minimize the reflection and absorption of sunlight so that more sunlight can pass through the protective glass and hit the solar cell, the quality of the encapsulation glass is very important. Because of this unique feature, as the global use of solar energy continues to rise and the installation of solar modules and panels increases, there is an even greater demand for specialized, high-quality and high-transparency solar glass products.

This report studies the global Solar Glass production, demand, key manufacturers, and key regions.
