## Abstracts

The global Solar Gold Pearlescent Pigments market size is expected to reach \$ 186 million by 2032, rising at a market growth of 2.1% CAGR during the forecast period (2026-2032).

Pearlescent pigments are pigments with particular layered structures which make the light reflect at different levels. Under the right circumstances, the reflected waves can interfere with each other, causing amplification or cancellation. Depending on the structure of the layers in each case, this creates the brilliant interference color which gives the pigments their unique character.
