Solar low intensity aviation obstruction light is a type of lighting fixture used to mark obstructions, such as towers, tall buildings, or wind turbines, that pose a hazard to aviation. It operates on solar power, harnessing energy from the sun to charge a battery that powers the light. The low-intensity light is typically emitted in a steady or flashing pattern and meets the prescribed regulations and standards for aviation obstruction lighting. Solar low-intensity aviation obstruction lights are often used in remote or off-grid locations where traditional power sources are not readily available.
