## Abstracts

Solar module laminating machine refers to the laminating process. The lamination process includes extracting air from the module layer in the vacuum chamber, heating each layer to melt the sealant, and then pressing each layer together with the flexible diaphragm to embed the battery into the sealant and bond the front and rear plates. Solar panel lamination can ensure the service life of modular solar cells, because they need to be able to withstand outdoor exposure to various climatic conditions for 25 years or more. Solar modules need to convert sunlight into electricity at an acceptable cost throughout their life cycle.

According to our (Global Info Research) latest study, the global Solar Module Laminating Machine market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.
