Abstracts

Solar module production line refers to a series of machines required to manufacture modules that can convert solar energy into electric energy. These modules are assembled on a specific machine, starting with the basic components. The main components are photovoltaic cells, glass, encapsulant and backplane. By introducing these and other components into the production line, a complete module can be produced for sale and installation. It includes four main process stages: lap and series connection, lamination, finishing and quality test.

According to our (Global Info Research) latest study, the global Solar Module Production Line market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.
