Abstracts

The global Solar Panel Recycling Services market size is expected to reach \$ 1293 million by 2032, rising at a market growth of 5.2% CAGR during the forecast period (2026-2032).

Solar panel recycling services provide a professional service for the systematic disassembly, material separation, harmless treatment, and resource reuse of retired, damaged, or end-of-life photovoltaic modules. Its core goal is to environmentally recycle the high-value materials within the modules, reducing the environmental impact of electronic waste. This service also promotes closed-loop development within the photovoltaic industry, reducing reliance on virgin resources, and is a crucial component in achieving sustainable development.

Solar panel recycling services hold significant growth potential, driven primarily by the continued expansion of global installed photovoltaic (PV) capacity, the impending wave of mass decommissioning for first-generation PV modules, supportive circular economy policies, and the need to secure supplies of critical metals. Following over a decade of rapid industry growth, a vast number of early-stage PV plants are set to enter a cycle of large-scale decommissioning around 2030, creating a demand for the processing of millions of tons of retired PV modules over the next one to two decades. Concurrently, economic policies worldwide are actively fostering the development of PV module recycling systems. Future industry competition will shift from basic dismantling and processing toward high-value material recovery, highly automated production lines, and closed-loop supply chain management; companies possessing advanced capabilities in silicon and silver recovery, as well as high-purity glass utilization, will command greater market value.

This report studies the global Solar Panel Recycling Services demand, key companies, and key regions.
