Abstracts

Solar paper is a very thin & portable solar charger for mobile phones and other electronic devices which use a USB cable. It does not require any external electric source as it generates its own power using solar energy. Since the usage of mobile phones is no longer limited to answering calls and messages after they turned into smartphones, this technology results in limited consumption of battery life. A portable charger which can be used frequently irrespective of the surroundings is the need of the hour. Solar paper is essentially a thin, lightweight, fast, reliable, and easy-to-use portable charger. On a bright and sunny day, it can charge a phone in about 2.5 hours, which is almost the same amount of time required by the conventional wall charger. A major plus point of solar paper is that it can be carried & used anywhere, simply due to the fact that the sun shines everyday on planet earth, providing uninterrupted, tax-free energy.
