According to our (Global Info Research) latest study, the global Solar Photovoltaic Cable market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Solar photovoltaic cable, also known as solar PV cable or solar cable, is a specialized type of cable used in solar power systems to connect solar panels, inverters, and other components. It is designed to safely and efficiently transmit the direct current (DC) power generated by solar panels to the inverter for conversion into alternating current (AC) power. Solar photovoltaic cables are manufactured in compliance with international standards such as IEC 60227, IEC 60245, and UL 4703. When selecting solar PV cables, it is important to consider factors such as cable size, voltage rating, temperature rating, and compliance with relevant standards to ensure the safe and efficient operation of the solar power system.

It is expected that global demand for photovoltaic products will remain high in the next few years. According to our PV & Solar Research Center, by the end of 2022, the global cumulative installed photovoltaic power generation capacity is about 1180 GW. According to the data of China Photovoltaic Industry Association, the global newly installed photovoltaic capacity in 2022 is about 230 GW, and this number in 2023 is predicted to be 280-330 GW. According to the data of the Ministry of Industry and Information Technology, the total output value of China's photovoltaic industry exceeded 1.4 trillion yuan in 2022. From the perspective of production value, mainland China is still the global center of the PV industry. According to the International Energy Agency, China market share in all key products of the supply chain have exceeded 80%. Among them, the production capacity of silicon wafers, solar cells, and

components accounts for as high as 98%, 85% and 77%, respectively. According to the data released by the European Photovoltaic Association, 27 EU countries gained a new PV installed capacity of 41.4 GW in 2022. According to the report of the US Solar Energy Industries Association (SEIA), the US held a new PV installed capacity of less than 19 GW in 2022. But it is estimated that from 2023, the average annual growth rate of new photovoltaic installed capacity will exceed 21%. In terms of Japan, based on data from Fitch and the US Energy Information Administration (EIA), in 2022, Japan's newly installed photovoltaic capacity was 3.107 GW.
