Abstracts

Common battery technologies used in today's PV systems include the valve regulated lead-acid battery— a modified version of the conventional lead-acid battery, nickel-cadmium and lithium-ion batteries. Compared to the other types, lead-acid batteries have a shorter lifetime and lower energy density. However, due to their high reliability, low self discharge as well as low investment and maintenance costs, they are currently the predominant technology used in small-scale, residential PV systems, as lithium-ion batteries are still being developed and about 3.5 times as expensive as lead-acid batteries.
