The global Solar Photovoltaic Design Software market size is expected to reach \$ 3059 million by 2032, rising at a market growth of 5.5% CAGR during the forecast period (2026-2032).

Solar photovoltaic (PV) design software is a specialized tool for planning, simulating, and optimizing PV power generation systems. By integrating geographic information systems, meteorological databases, and PV module and inverter product libraries, it helps engineers complete the entire digital design process, from site selection assessment, shading analysis, module layout, and electrical design to power generation simulation and economic analysis. Its core lies in predicting the system's power generation performance throughout its entire lifecycle, evaluating return on investment, and automatically generating design drawings, bills of materials, and technical reports that meet engineering specifications through precise physical and mathematical modeling. This software serves as a crucial bridge between project ideas and implementation, aiming to maximize the safety, economy, and power generation efficiency of PV power plants. It is widely used in various scenarios, including residential, commercial, and large-scale ground-mounted power plants.

The future of pharmacy medication management software will transcend traditional inventory management tools, evolving into a core hub for smart healthcare and health services. In the future, it will deeply integrate artificial intelligence and big data analytics to achieve intelligent procurement, automated prescription review, personalized medication monitoring, and full-cycle management of chronic diseases. With the coordinated development of 'medical care, pharmaceuticals, and insurance,' this software will become a key node connecting internet hospitals, electronic medical insurance vouchers, drug traceability platforms, and instant delivery networks, driving integrated online and offline services. Under the policy backdrop of prescription outflow and volume-based procurement, its value will shift from efficiency improvement to data-

driven precision services and business innovation, helping pharmacies transform from drug sales terminals into patient-centered community health management centers. It is an indispensable digital infrastructure for realizing new retail in pharmaceuticals and value-based healthcare.
