Silicon wafer cutting is the main process of slicing production. Solar Photovoltaic Diamond Wire can be used for silicon rod cutting, silicon ingot square cutting, and silicon wafer cutting. Its cutting performance directly affects the quality of silicon wafers and the photoelectric conversion performance of photovoltaic modules.

From a global perspective, the transformation of the world's energy structure to a diversified, clean, and low-carbon direction is an irreversible trend. Governments are still actively encouraging the development of the solar photovoltaic industry. It has good development opportunities and will maintain a rapid growth trend in the future.

Since the beginning of the 21st century, the demand for upgrading the global energy structure has become increasingly urgent, and the status of the photovoltaic industry in the energy industry has continued to rise. The Chinese government attaches great importance to the development of clean energy, has created a good macro policy environment, and provided development opportunities for the solar energy industry.

Diamond wire refers to the use of electroplating process or resin bonding method to fix the diamond abrasive on the wire.
